DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
2. Authorization for this examiner's amendment was given in a telephone interview with Lawrence A. Baratta Jr. on 1/27/2008.
3. The application has been amended as follows:

Claim 1 (Currently Amended). A system for tracking location of a wireless device, the system comprising:

a system data store capable of storing one or more tracking criteria and indicators of one or more wireless devices to track;

a set of one or more wireless receivers on one or more wireless sensors;

the wireless sensors monitoring wireless header information from a wireless packet frame;

a system processor in communication with the system data store and the one or more wireless sensors, wherein the system processor comprises one or more processing elements programmed or adapted to perform the steps comprising of:

(a) identifying a wireless device for tracking based upon a combination of dynamic operational and security assessments derived using data from the system data store, wherein the

dynamic operational and security assessments identify the wireless device for tracking responsive to behavior of the wireless device, wherein the dynamic operational and security assessments comprise wireless signature-based tests, wireless protocol-based tests, wireless anomaly-based tests, and wireless policy deviation-based tests, wherein the policy deviation-based tests comprise a deviation from a set of ~~[[one]]~~ three or more wireless policy settings comprising wireless channel settings, wireless authentication settings, wireless encryption settings, SSID broadcast settings, and rate settings, and wherein the policy deviation-based tests ensure the wireless device is complying with the one or more wireless policy settings;

(b) receiving data from a subset of the one or more wireless sensors;

(c) storing the received data in the system data store, wherein the received data is utilized to update wireless statistics used in the dynamic operational and security assessments, wherein the wireless statistics enable the dynamic operational and security assessments to detect both unauthorized wireless devices and authorized wireless devices which are displaying anomalous behavior;

(d) calculating the position of the identified wireless device based upon the stored data;
and

(e) outputting the calculated position.

Claim 19 (Currently Amended). A method for tracking location of a wireless device, the method comprising the steps of:

(a) detecting a wireless device utilizing one or more dynamic operational and security assessments, wherein the one or more dynamic operational and security assessments detect the

wireless device responsive to behavior of the wireless device, and wherein the dynamic operational and security assessments comprise wireless signature- based tests, wireless protocol-based tests, wireless anomaly-based tests, and wireless policy deviation-based tests, wherein the policy deviation-based tests comprise a deviation from a set of ~~[[one]]~~ three or more wireless policy settings comprising wireless channel settings, wireless authentication settings, wireless encryption settings, SSID broadcast settings, and rate settings, and wherein the policy deviation-based tests ensure the wireless device is complying with the one or more wireless policy settings;

(b) adding an indicator associated with the detected wireless device to a list of wireless devices;

(c) selecting a wireless device for tracking based upon the list of wireless devices;

(d) receiving data from one or more wireless sensors, the wireless sensors monitoring wireless header information from a wireless packet frame; wherein received data is utilized to update wireless statistics used in the dynamic operational and security assessments, wherein the wireless statistics enable the dynamic operational and security assessments to detect both unauthorized wireless devices and authorized wireless devices which are displaying anomalous behavior;

(e) calculating a position of the selected wireless device based upon the received data;

(f) outputting the calculated position;

(g) repeating steps (a) and (b) upon occurrence of an event or at periodic intervals;

(h) repeating steps (c) through (f) upon occurrence of an event or at periodic intervals.

Claim 21 (Currently Amended). A system for tracking location of a wireless device, the system comprising:

storing means for storing one or more tracking criteria and indicators of one or more wireless devices to track;

one or more wireless sensors for scanning wireless traffic; the wireless sensors monitoring wireless header information from a wireless packet frame;

distributed rogue detection means for detecting a wireless device based upon one or more dynamic operational and security assessments operable to detect the wireless device based on behavior, wherein the assessments are performed on the received scan data, and for storing an indicator of the detected wireless device, wherein the distributed rogue detection means is distributed between the one or more wireless sensors and a host system; and

position determining means for selecting a wireless device to track from the indicators in the storing means, receiving scan data from one or more wireless receivers, estimating the position of the selected wireless device based upon received scan data and outputting the estimated position;

wherein the dynamic operational and security assessments comprise wireless signature-based tests, wireless protocol-based tests, wireless anomaly-based tests, and wireless policy deviation-based tests, and wherein the policy deviation-based tests ensure the wireless device is complying with the one or more wireless policy settings;

wherein the policy deviation-based tests comprise a deviation from a set of ~~[[one]]~~ three or more wireless policy settings comprising wireless channel settings, wireless authentication settings, wireless encryption settings, SSID broadcast settings, and rate settings; and wherein

received scan data is utilized to update wireless statistics used in the dynamic operational and security assessments, and

wherein the wireless statistics enable the dynamic operational and security assessments to detect both unauthorized wireless devices and authorized wireless devices which are displaying anomalous behavior.

Allowable Subject Matter

4. Claims 1-21 are allowed.

5. The following is an examiner's statement of reasons for allowance:

Claims 1, 19, 20, and 21 are allowed because the closest prior art, Challenger (Pub. No.: US 2003/0186679) in views of Zuk et al. (Pub. No.: US 2003/0154399) and Campbell et al. (Patent No.: US 6,893,850), either alone or in combination, fail to anticipate or render obvious a system, computer readable media, and a method for tracking location of a wireless device comprising one or more wireless sensors, the wireless sensors monitoring wireless header information from a wireless packet frame, wherein the policy deviation-based test comprise a deviation from a set of three or more wireless policy settings comprising wireless channel settings, wireless authentication settings, wireless encryption settings, SSID broadcast settings, and rate settings, in combination with all other limitations in the claim(s) as defined by applicant.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Zavidniak (Patent No.: US 7,068,998) discloses a methodology for the detection of intrusion into radio frequency based networks and Bruton, III et al. (Patent No.: US 7,076,803) discloses intrusion detection services.
